TECHNICAL TRAINING

Enterprise System Analysis & Design – JEE

IDB-BISEW IT Scholarship Project | Center for Computer Studies Ltd. (CCSL) Nov 2025 – Sep 2026 |

788 Hours

SKILLS

- Java
- Spring Boot
- Spring Security
- JWT Authentication
- Angular
- Typescript
- Web Design
- Flutter
- Android
- SQL / NoSQL
- Firebase

CAREER OBJECTIVE

Self-motivated Full Stack Java Developer who enjoys solving real problems through code, skilled in Java, Spring Boot, Angular, Typescript, and Flutter. Built and maintained a complete Supply Chain Management System from database design to user interface covering procurement, inventory, quality control, sales, and delivery operations, delivered across web, native Android, and cross-platform apps. Also developed a desktop POS application using Java Swing and MySQL. Holds an MBA in Management from Dhaka University, combining technical and business perspective. Comfortable working independently, quick to learn new tools, and looking for a role where I can contribute from day one and grow into more responsibility over time.

PROJECTS & SUPPORTING TOOLS

Supply Chain Management System

Technologies: *Java, Spring Boot, Angular, Typescript, MySQL, Tailwind CSS*

- Built the backend using Spring Boot with 15 core modules covering Procurement, Import, Inbound Logistics, Quality Control, Inventory, Sales, and Delivery operations (including Purchase Requisition, Quotation, Purchase Order, Letter of Credit, Shipment, Goods Received Note, QC Inspection, Stock Movement, Customer Order, Invoice, Delivery Trip, Vehicle, Driver, and Daily Report).
- Added user login, procurement tracking to monitor ordered items and progress, and customer order tracking throughout the sales cycle.
- Built Quality Control and Inventory workflows with PASS/FAIL validation, automatically transferring approved products from QC Hold to Available Warehouse while routing rejected ones through return/rejection processes.
- Set up complete sales, transportation, and delivery lifecycle management including customer orders, invoices, delivery trips, and daily operational reports.
- Built the frontend in Angular with responsive operational interfaces and dashboards using Tailwind CSS, featuring Chart.js-based reporting and analytics for supply chain operations.

Supply Chain Management System (Native Android)

Technologies: *Java, Android, Spring Boot, MySQL*

- Built a native Android app for the supply chain system, connected to the existing Spring Boot backend through REST APIs, covering procurement, inventory, QC, sales, and delivery operations.
- Implemented secure user authentication, role-based access control, and real-time updates with email and WebSockets for activity notifications and verifications.

EDUCATION QUALIFICATIONS

MBA in Management
Gov. Bangla collage (DU) | CGPA: 3.17 | 2022–2023

BBA in Management
Gov. Bangla collage (DU) | CGPA: 3.04 | 2018–2019

H.S.C in Business Studies
Ulla Para Science College | GPA: 4.17 | 2018

S.S.C in Business Studies
Khondokar Abdul Majid High School | GPA: 4.67 | 2016

LANGUAGE

Bengali — Native
English — Professional
Hindi — Verbal

PERSONAL DETAILS

Father's Name: Md. Fazlul Karim
Mother's Name: Mst. Hasiyara
Date of Birth: 10th Oct 1999
Gender: Male
Religion: Islam
Marital Status: Unmarried
Nationality: Bangladeshi

Supply Chain Management System (Cross Platform)

Technologies: *Flutter, Dart, Spring Boot, MySQL*

- Built a cross-platform mobile app in Flutter connected to the existing Spring Boot REST APIs, covering procurement, inventory, QC, sales, and delivery operations.
- Integrated secure authentication, role-based access control, and real-time email/WebSocket notifications for instant status updates on operations.

GitHub: SupplyChainManagement/tree/main/Flutter/scm_flutter

POS System

Technologies: Java, Java Swing, MySQL, JDBC

- Built a desktop point of sale application using Java Swing and MySQL, with login, product, category, supplier, and sales management.
- Added invoicing feature to create multi line sales with quantity, discount, and automatic total calculation, saved to database.
- Used DAO pattern with JDBC for database access across all modules.
